SIDING & ACCESSORIES

2026 SIDING COLLECTION

Making intelligent color selection

Choosing the colors for your home's exterior should be fun – but knowing where to start isn't always easy. We created this color and design guide to give you a few ideas for putting together a great new look for your home. So sit back, relax, and most of all, be brave. Choosing color is easier than you think.

Tips to Get Started

Siding covers about half of the exterior of an average home, and it is the most important color choice you will make. Roof color has about 20% visual impact. Accent, shutter, door and trim colors are the details that complete your home's look.

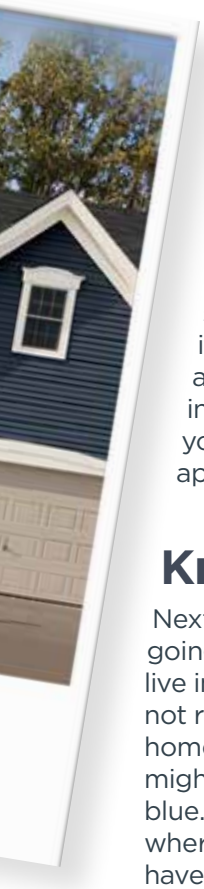
Also, your roof and any brick or stone accents can give you a place to start when choosing a color scheme. You may want to highlight your home's best features with contrasting trim and corner posts to draw attention.

Gather Your Ideas

Look at magazines, or drive around your neighborhood to see what you like best. Keep notes or take photos or the colors you like and you'll begin to notice a pattern. This will be an important step as you narrow down your color choices. Having an idea of what colors you really like can make choosing your home's exterior a lot easier.

Remember to Look at Real Color Samples

Ask your contractor or builder to show you large samples of the colors you like best. It is also helpful to take samples outside to see how the color looks in natural light on all sides of your home. If your home has any brick, stone or wood accents, see how the sample complements or contrasts that existing building material.



Your architectural style

The first step is considering the architectural style of your home. Specific styles point to the use of appropriate color schemes. Non-specific styles may offer clues that can guide your color choices. Even if your home does not fall into a specific category or architectural style, see if you notice details that are reminiscent of a particular style. Selecting colors that are in alignment with those clues can give your home a sense of "rightness" or appropriateness of color selection.

Know your surroundings

Next step is to look around you and see what is going on in your immediate surroundings. If you live in a densely built community, it is preferable to not repeat a color that appears too close to your home. If there is a blue house across the street, it might be better to steer away from that particular blue. If you live in a more sparsely built situation, where your home is isolated from others, then you have more latitude when choosing a color.

Finding your personal taste

Now it is time for some soul searching about the colors that make you happy. Are your choices usually bold or do you feels more comfortable with quiet colors? The goal is to feel pleasure each time you arrive home and what makes you happy is a very personal decision.

Staying put, or ready to sell?

How long do you plan to stay in your home? If you expect to be moving in a handful of years, you probably want to consider a more conservative color scheme. This does not have to mean boring, but it is wise to avoid colors that may feel too "out there" to potential buyers. Remember that what feels popular now may feel dated in five years when it's time to sell.

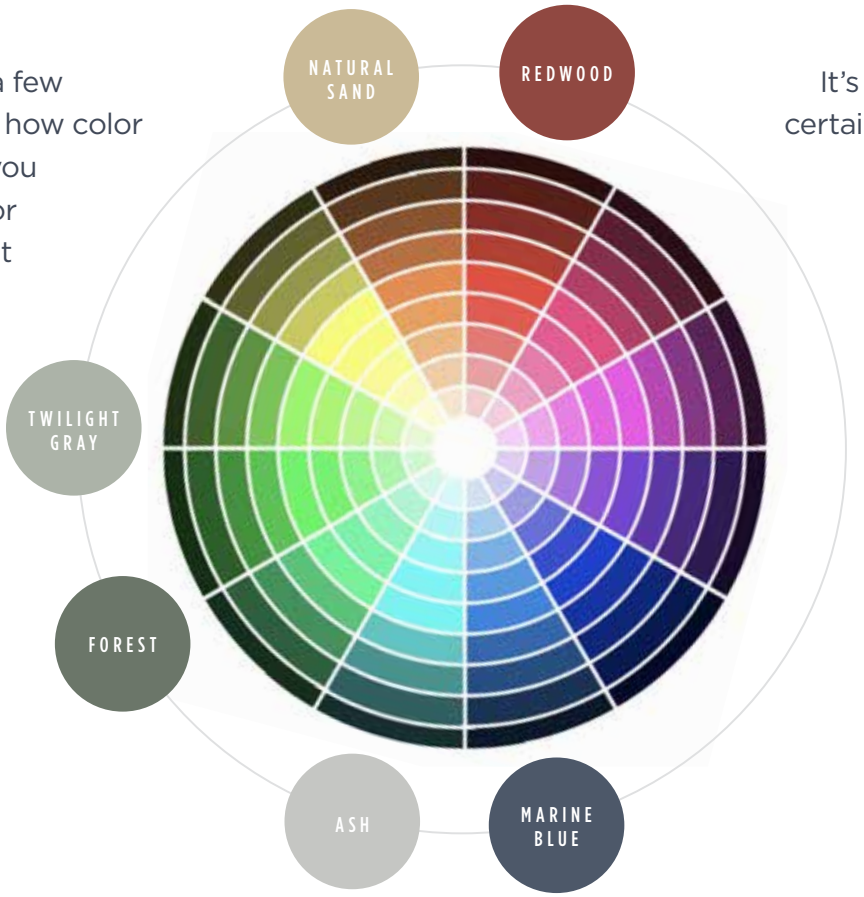
Working with what you have

It is important to analyze the fixed elements of your home's exterior when selecting color. Is there stone or brick on your facade and if so, what color is it? How about your roof? Will it need to be replaced any time soon or will you be looking at that color for along time?

We never see colors in isolation -- it is always about the combination of materials, both color and texture. Decide whether you like your fixed materials and want to enhance them or whether you'd prefer to minimize their prominence.

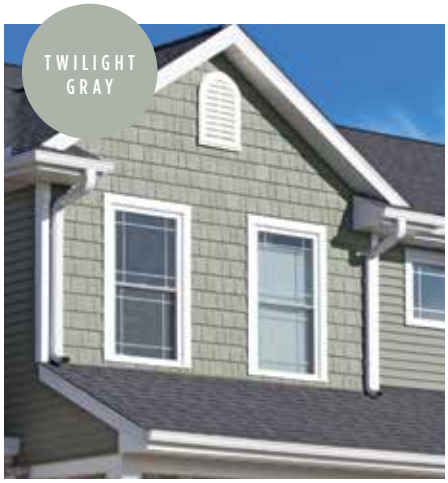
Putting color theory into practice

Understanding a few principles about how color works will help you create an exterior color palette that fits with your architectural style and puts a smile on your face every time you arrive home.



It's pretty obvious where certain colors can be found on the color wheel. But even colors we consider "neutrals" still belong to a color family on the color wheel.

Understanding the underlying color of a neutral will allow you to combine colors with greater ease and help you avoid surprises.



Consider your roof color.

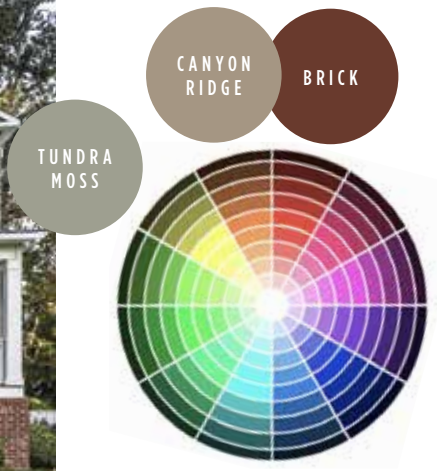
Notice how the Marine Blue, from the blue side of the color wheel, makes the orange roofing seem even more orange.

Some roof colors lean a little orange and the siding you select may either intensify the tone of the roof color or blend in with the roof.

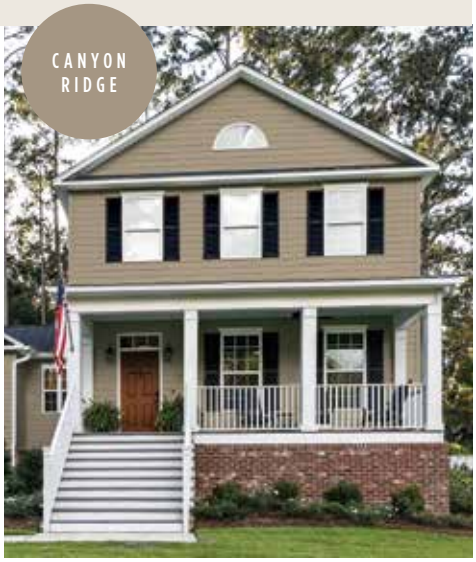
Whereas the Rustic Oak siding diminishes the orange appearance of the roof shingles because the siding color and the roofing color are from the same color family.

Here are two neutrals, which seem similar at first glance.

Tundra Moss, from the green family, will enhance the red tones in the brick because the two colors are from opposite sides of the color wheel. Instead of two seemingly neutral materials, these two "push" each other, potentially resulting in a pink and green house. It could be an appealing scheme for a cottage but not necessarily for a Craftsman bungalow.



They are both mid-tone neutrals and one might expect them to look roughly the same on their home. But if that home has accents of red brick, the end result can be quite different.



Canyon Ridge, which is a dark beige, is actually a darker member of the orange family, so dark you can't even see the red. But when you pair Canyon Ridge with the red brick, the brick settles in and feels less bold.

WOLVERINE
by certainteed

Wolverine by CertainTeed is a signature collection of tough and durable vinyl siding products featuring authentic woodgrain styles and fade-resistant colors that weather any storm.

This full, curated line of products and accessories is backed up by CertainTeed's Limited Warranty.

THE WOLVERINE BRAND WAS FOUNDED IN **1952**

In 1986 Wolverine introduced the manufacturing process known as Co-Extrusion. This process has now become the industry standard for manufacturing vinyl siding.

WOLVERINE PRODUCTS OFFER MORE THAN JUST PREMIUM PROTECTION

- Low maintenance, never needs painting, staining, or caulking.
- Engineered to be resilient against the elements and immune to moisture damage.
- Mimics the beauty of natural wood with woodgrain textures.
- Designed to be impact resistant and durable.
- Recyclable after use making it a smart, sustainable choice.

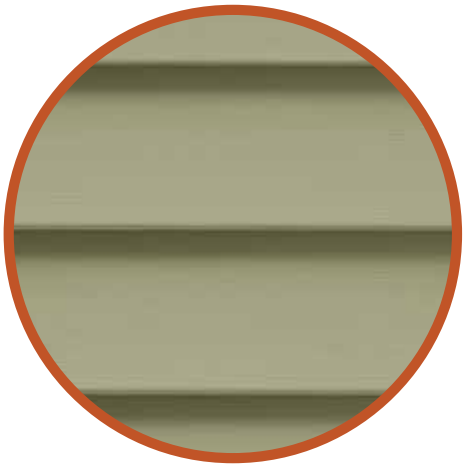
TRUCOLOR® TECHNOLOGY

Wolverine siding with TruColor protection offers superior color retention and one of the industry's best warranties. This exclusive color protection formula protects siding from fading or discoloring, ensuring that your home will always look its best.

* Expressions® Colors

PROFILES

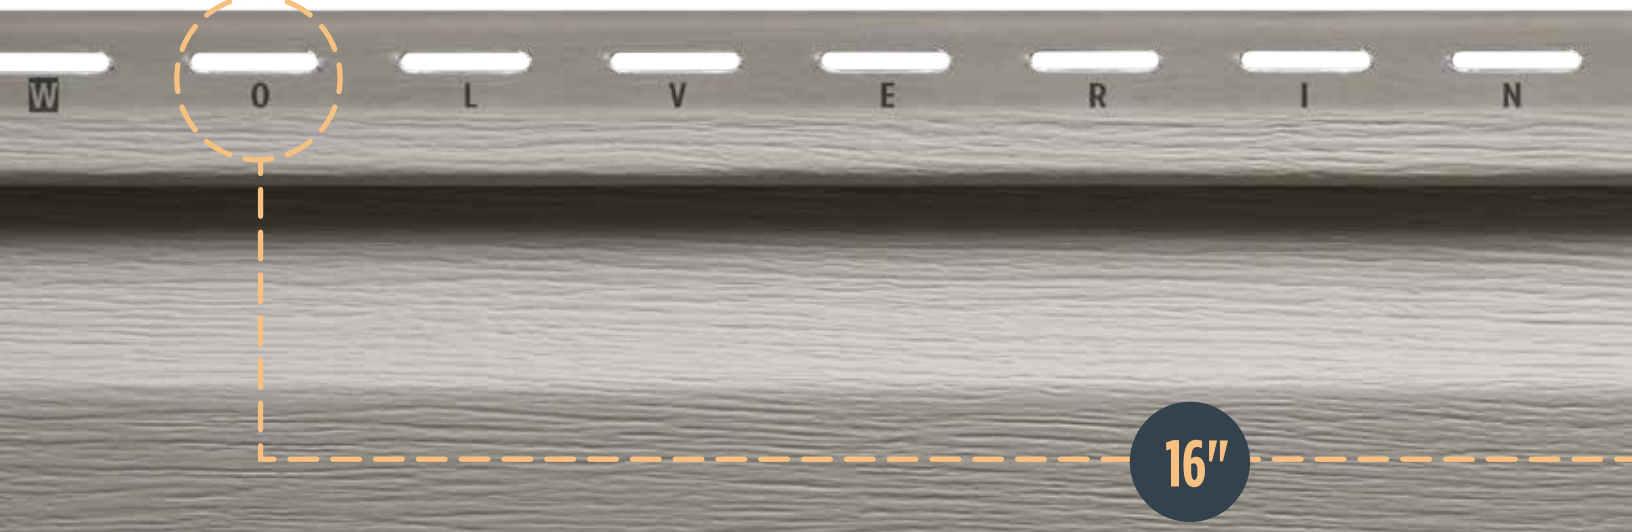
Shingles mimic the look of wood siding with square-edged vertical lines and the texture of cedar. They can be used on an entire home or for accent on larger homes for a spectacular visual contrast.



Traditional clapboard is the profile most often chosen by homeowners. Each "board" appears to overlap the one below it, creating the look of wood siding. Traditional panels "set" closer to the exterior wall for a slimmer profile.

Dutchlap profiles are similar to traditional clapboard siding with the addition of a sharply angled bevel directly underneath each "overlap." This gives the siding softer shadow lines add a more distinctive look.

WOLVERINE STUD LOCATOR makes installation easier and more accurate. Stud Locator adds letters to the panel's nail hem. The letters help ensure proper nailing into studs and help find studs faster. (found on Prestige 044, Wildcreek 042 and Groveland 040 Siding)



Board & Batten
traditionally created by using vertical boards with battens covering the seams. The alternating wide and narrow vertical panels can be used for whole-house application, or in combination with traditional clapboard siding.

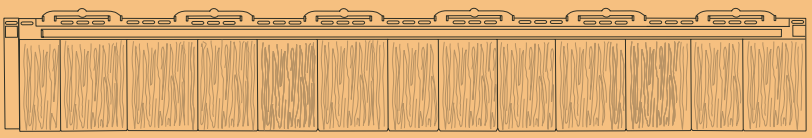
Colors shown throughout this brochure are as accurate as printing methods will permit. Please see product samples before making final selection. Materials of differing gloss level, texture, composition and orientation can look different despite being the same color, it is important to get samples of every product being considered and place them where they will be installed.

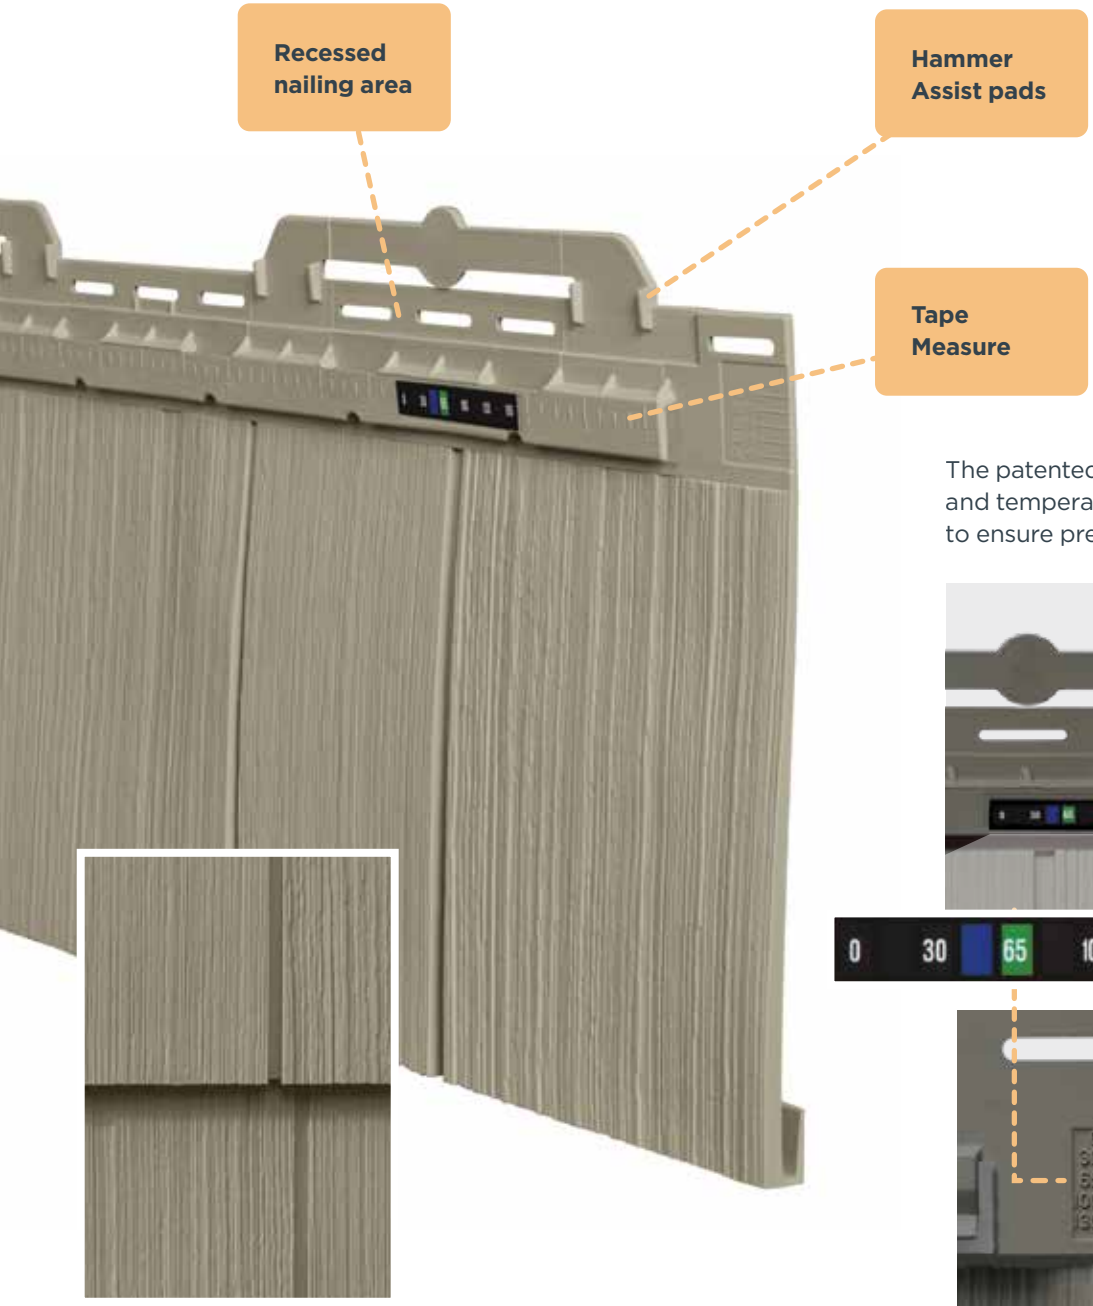
HEARTWOOD PRO

HEARTWOOD PRO SIDING PANELS COME IN ONE PROFILE:



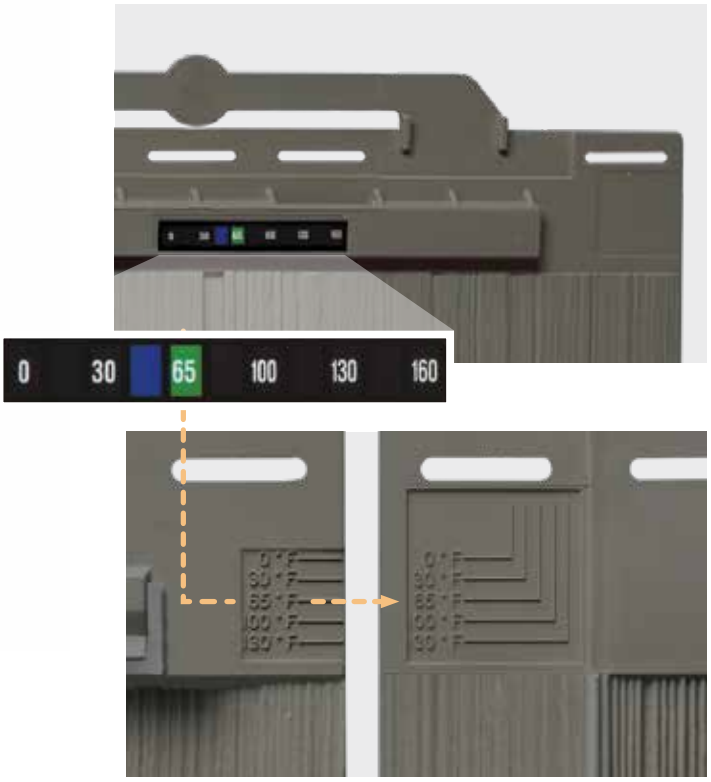
Single 7" Shingle
Exposure: 7"
Length: 73-1/2"

* Expressions® Colors



Clean edges and smooth lines complement the natural wood texture with Enhanced shadow lines for better aesthetics.

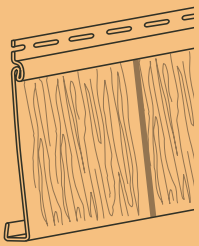
The patented **PanelThermometer™** and temperature lines are designed to ensure precise installation.



*Smokestone | *Harbour | Twilight Gray | Rustic Clay | Canyon Ridge | RiverStone | Ash | White

HEARTWOOD

HEARTWOOD SIDING PANELS COME IN ONE PROFILE:



Single 7" Shingle
Exposure: 7"
Length: 10' 1"

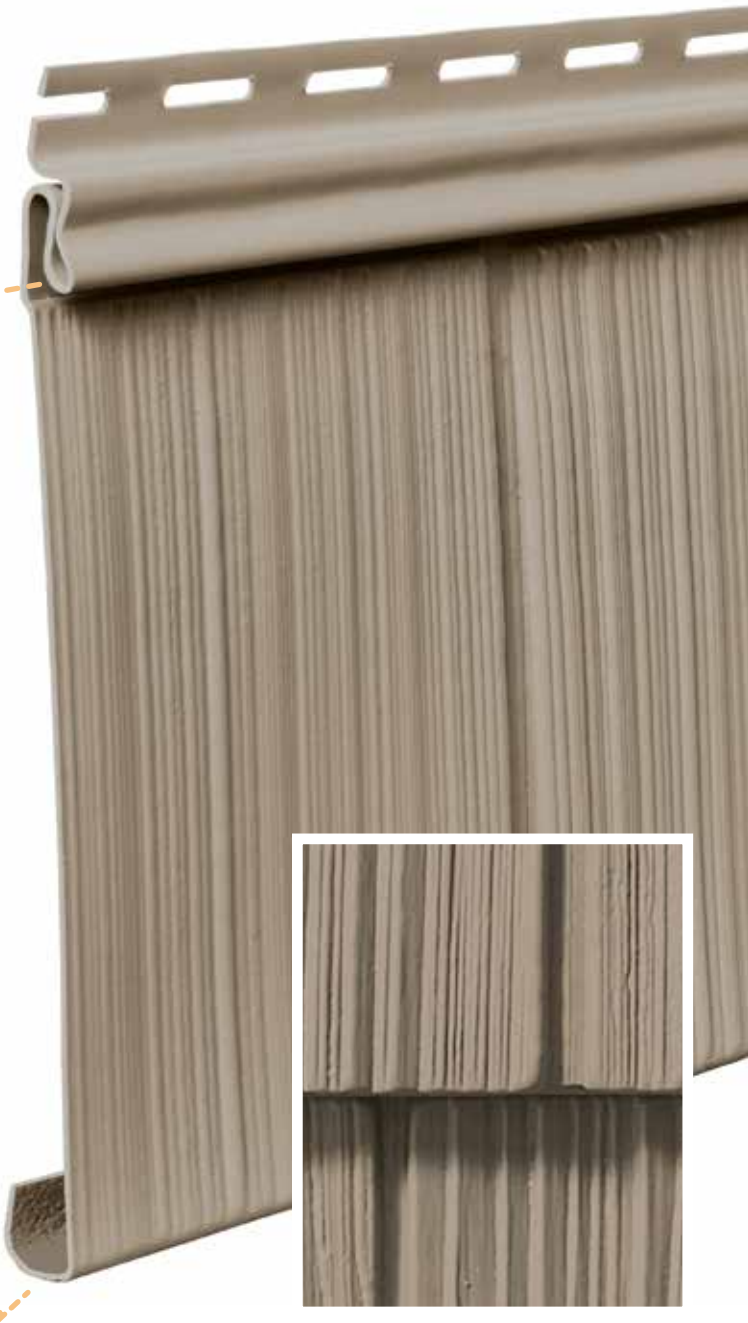
Unique continuous lock holds panels snug and secure to the wall.

Thick, sturdy panel for strength and rigidity.

Class 1A Fire Rating Classification for fire safety.

3/4" Deep, realistic panel projection creates enhanced shadow lines.

Random patterns and varying gaps in the panel design hide seams.



Low gloss woodgrain texture looks like hand-crafted perfection cedar.

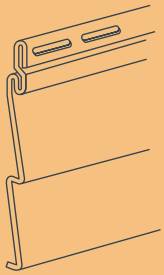
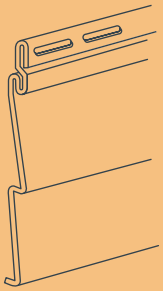
PRESTIGE® 044

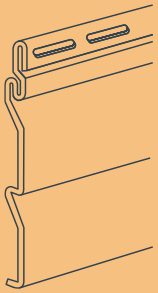
PRESTIGE 044 SIDING PANELS COME IN THREE PROFILES:



Double 4"
Traditional Clapboard
Exposure: 8"
Length: 12' 6"



Double 4-1/2"
Traditional Clapboard
Exposure: 9"
Length: 12' 1"

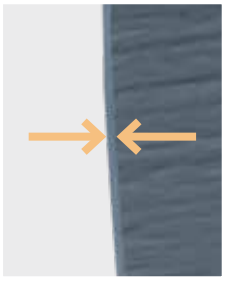


Double 4-1/2"
Dutch Lap
Exposure: 9"
Length: 12' 1"

Double-thick nailing hem adds strength where the panel is attached to the wall, resisting wind loads and helping to smooth wall irregularities.

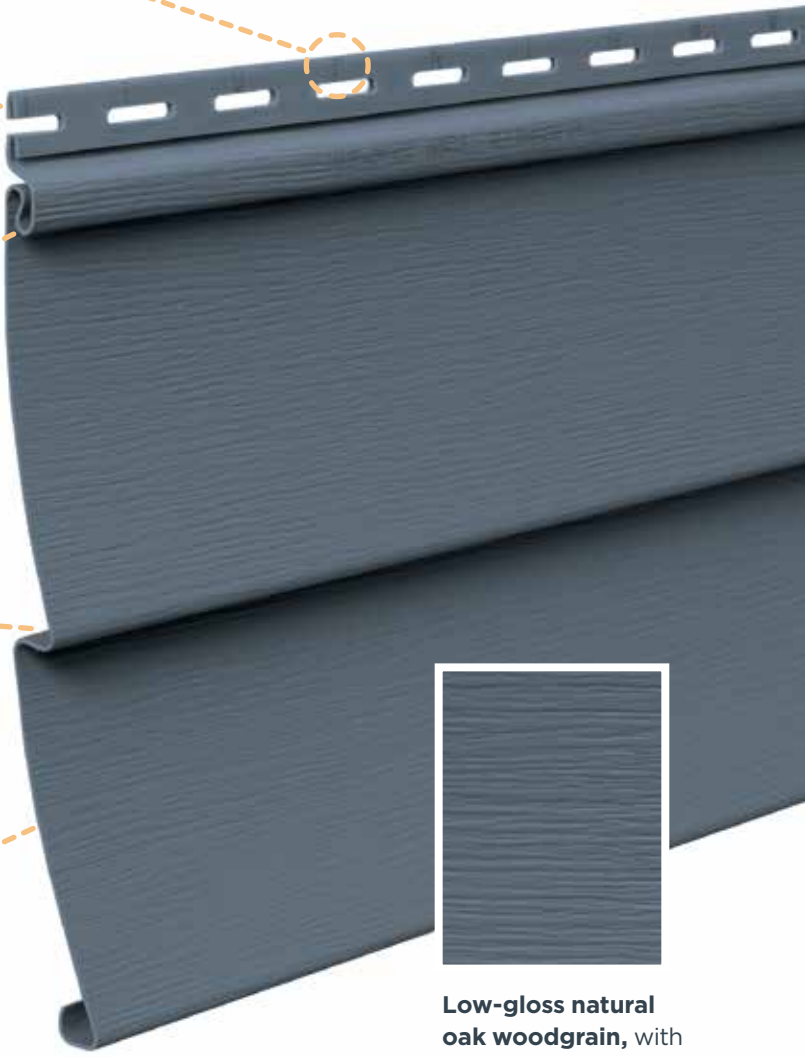
Insta-Lock™ locking system holds panels securely, while allowing expansion and contraction in changing temperatures.

9/16" deep panel projection creates enhanced shadow lines with the look of real wood.



.044" thickness offers lasting strength, while precise dimensional consistency ensures a snug fit and tight laps.

Stud Locator makes installation easier and more accurate. Stud Locator adds letters to the panel's nail hem. The letters help ensure proper nailing into studs and help find studs faster.



Low-gloss natural oak woodgrain, with a hand-crafted look.

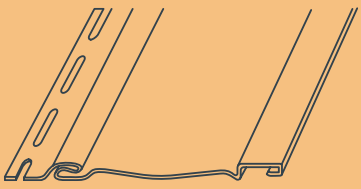
BOARD & BATTEN

BOARD & BATTEN SIDING PANELS COME IN ONE PROFILE:



Single 7"
Panel
Exposure: 7"
Length: 10'

1/2" Panel projection creates enhanced shadow lines with the look of real wood.

Innovative locking system holds panels in place.

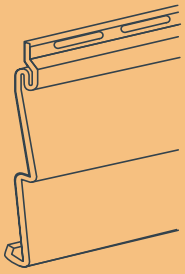
.052" thickness offers lasting toughness, while precise dimensional consistency ensures a snug fit and tight laps.

Cedar Grain finish resembles the natural look of real wood.

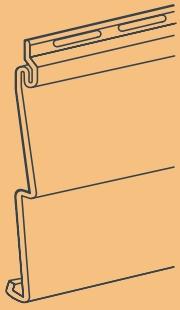
* Expressions® Colors

WILDCREEK® 042

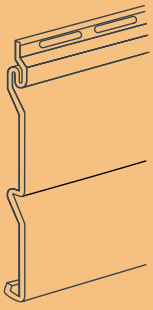
WILDCREEK 042 SIDING PANELS COME IN FOUR PROFILES:



Double 4″
Traditional Clapboard
Exposure: 8″
Length: 12′ 6″



Double 5″
Traditional Clapboard
Exposure: 10″
Length: 12′

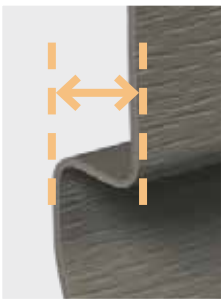


Double 5″
Dutch Lap
Exposure: 10″
Length: 12′

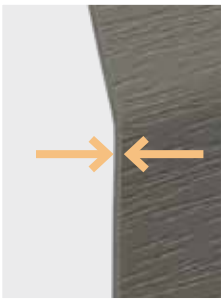
Single 8″
Traditional Clapboard
Exposure: 8″
Length: 12′ 6″

Rollover nail hem stiffens the nail hem, giving it a straighter appearance while contributing to wind load resistance.

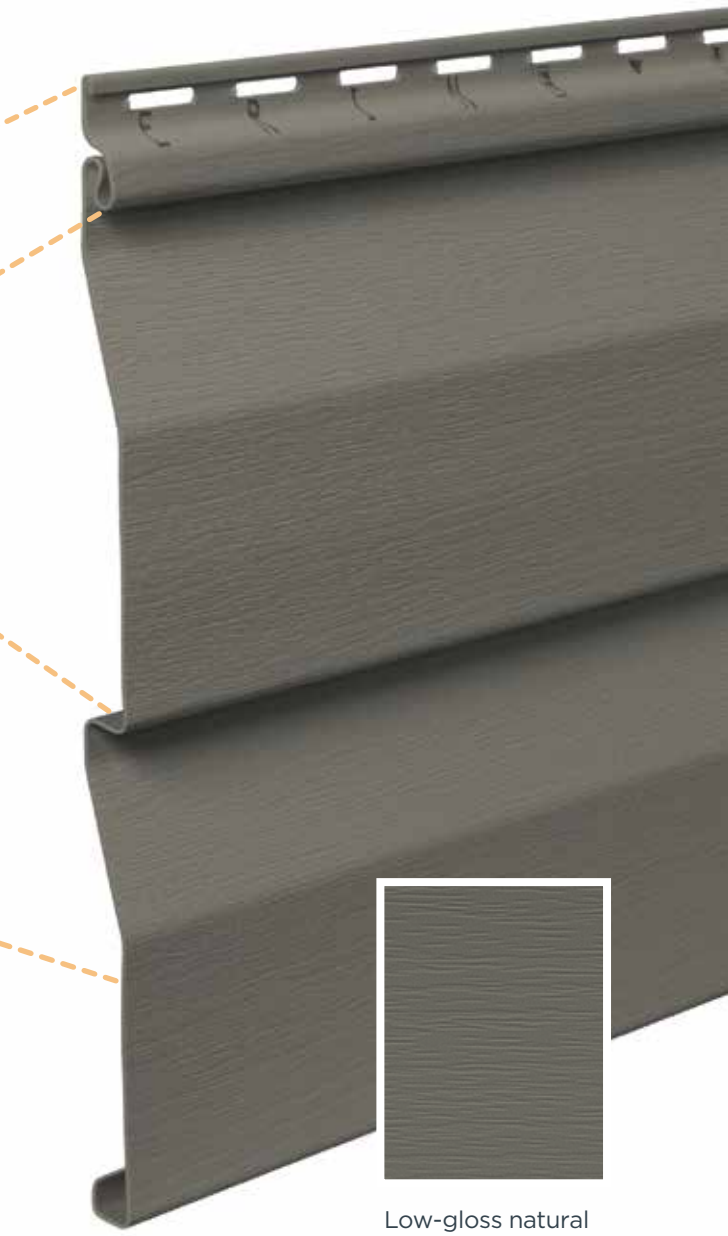
Insta-Lock™ locking system holds panels securely, while allowing expansion and contraction in changing temperatures.



1/2" Panel projection for double lap panels creates enhanced shadow lines with the look of real wood.



.042" thickness offers lasting toughness, while precise dimensional consistency ensures a snug fit and tight laps.



Low-gloss natural woodgrain.
